

bad_form.html

This is what a user sees when they submit invalid form data

views
forms

base.html

This reduced duplication of code by allowing for the same HTML/CSS elements to be applied to multiple pages (nav bars, links, etc)

views

creation_template.html

Same idea as base.html, but for form based views.

views
forms

detail.html

Shows the user full information on their notes as well as highlighting portions of their note

models
user
base.html
highlight.js

index.html

Shows the user an overview of their notes with options to view in detail, edit, or delete

views
base.html
models

notes_form.html

Creates a note for the user

views
creation_template

search-form.html

Searches notes the user has created

views
creation_template
custom_tags.py

search_results.html

Shows the user the results of the search on their notes. Search performed by SQL query and output format from custom_tags

views
custom_tags.py
SQLite

settings.html

Allows user to update profile settings

views
base.html
models

signup.html

Allows user to register with the site. User is added to database and then acts as a foreign key for the notes created

views
forms
models

404.html

Shows the user an adorable page of kittens when they navigate somewhere that doesn't exist

views

static/highlight.js

Highlights the content of a note from within the detail view

detail.html

All .html files pull from 'static' -- those are CSS files and images. Only highlight.js will be covered here
